Current and Expected Future Leadtime Adjustments on Apparatus Products

Dear Valued Partner,

The demand for switchgear, panelboards, switchboards, and busduct continues to be at the strongest levels in recent memory. Thank you for being a valued partner during these ever changing times. As orders continue to flow at a record pace, we are proactively adjusting leadtimes for all orders not released by May 9th 2022 to the following:

Low Voltage Switchgear – 54 Weeks
Switchboards SB1 – 32 weeks
Switchboards SB2 – 39 weeks
Switchboards SB3 – 41 weeks
Panelboards P2/P3 – 105 days (21 weeks)
Panelboards P5 – 160 days (32 weeks)
Busduct – 27 weeks

For clarity these are leadtimes after release not leadtime from order entry. These adjustments are to ensure we meet expectations on delivery. Given the current market conditions, we expect on June 6th to make an additional 7 week adjustment outward to leadtime on switchboards and 4 weeks on P2-P5 panelboards. Busduct will follow in similar range. We wanted to provide this additional visibility to plan future orders and releases accordingly. Any orders already released are not affected by this adjustment in lead times.

With best regards,

Siemens Smart Infrastructure Electrical Products
